١.

DETAILED ACTION

Election/Restrictions

1. Applicant's election without traverse of Group I (claims 1-15,25,27-33,44 and 50) in the reply filed on 04-22-04 is acknowledged.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1-15,25,27-33,44 and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Admitted Prior Art (APA) in view of Delgado et al (US 5,908,693) and Perrault et al (US 6,039,940).

With respect to claims 1 and 6-8. the APA discloses a (meth)acrylate pressure sensitive adhesive (PSA), the adhesive is inherently tacky, thus a tackifying resin is not needed. Accordingly, "[w]hen these (meth)acrylate monomers are polymerized, the homopolymers have a glass transition temperature (T_g) of less than about 25°C." (numbered paragraph 0004).

The APA does not teach incorporating "at least one copolymeirzed monoethylenically unsaturated reinforcing monomer, wherein the reinforcing monomer, when homopolymerized, has a T_g of at least about 25°C." to a meth(acrylate) PSA. However, it would have been obvious in the art to incorporate an inherently antimicrobial polymerized acrylated quaternary ammonium monomer (i.e. a covalently

Art Unit: 1733

bonded quaternary ammonium functionality) taught by Perrault et al to a meth(acrylate) PSA disclosed by the APA, because: a) the APA discloses providing an anti-microbial activity to pressure sensitive adhesive articles by depositing an anti-microbial agent to an adhesive surface of a wound dressing (numbered paragraphs 0001-0002); b) it is old in the art to form a wound dressing comprising an acrylate-based pressure sensitive adhesive of a type similar to a meth(acrylate) PSA disclosed by the APA, wherein an anti-microbial quaternary ammonium halide type agent is incorporated into a PSA as exemplified in the teachings of Delgado et al (col. 3 line 66 to col. 4 line 51; col. 8 line 30-64); and, c) Perrault et al teaches an intrinsically anti-microbial hydrogel wound dressing, the hydrogel is a polymerized acrylated quaternary ammonium monomer. accordingly the hydrogel is "non-irritating to the wound, absorb wound exudates, ... enhance the sterile environment around the wound.", and the "absorbency of the hydrogel means that, when applied as a wound dressing, fewer dressing changes are necessary, the wound heals faster and a moist healing environment is maintained." (abtract; col. 1 lines 8-13; col. 3 line 20 to col. 4 line 47; col. 6 line 23 to col. 7 line 40). It directly follows that, since a polymerized acrylated quaternary ammonium monomer (formula I; col. 3 line 40 to col. 4 line 33) taught by Perrault et al is indistinguishable from a reinforcing monomer disclosed in Applicant's specification (formula II; numbered paragraphs 0045-0048); the quaternary ammonium monomer taught by Perrault must have recited characteristics of a reinforcing monomer in recited claim 1. Moreover, since a modified PSA of the APA is indistinguishable from a recited PSA composition in claim

Art Unit: 1733

1, then it is also reasonably expected that, the recited properties in claims 6-10 to naturally flow from the modified adhesive of the APA.

With respect to claims 2-5, see column 5 lines 1-43 of the Delgado et al patent.

Note: it is conventional in the art to incorporate a non-reactive poly(alkylene oxide)

polymer to a meth(acryate) type PSA composition.

With respect to claims 11-14, see numbered paragraph 0003 of a disclosure of the APA. It is now well settled that "It is prima facie obvious to combine two compositions each of which is taught by the prior art to be useful for the same purpose, in order to form a third composition to be used for the same very same purpose ...". (MPEP 2144.06).

With respect to claim 25, the additional limitation in this claim reads on zero weight percent of copolymerized acidic monomer. Therefore, this claim would have been obvious in the art for the same reason as claim 1.

With respect to claims 27-33, 44 and 50, see numbered paragraph 0002 of the APA. The modified PSA of the APA is expected to be capable of adhering a wet skin, since the modified PSA is indistinguishable from the recited PSA of the present invention.

Information Disclosure Statement

The references cited by Applicant on the 1449's have been made of record.

While the statements filed clearly do not comply with the guidelines set forth in MPEP 2004 regarding both the number of references cited and elimination of clearly irrelecant art and marginally pertinent cumulative information, compliance with these

Application/Control Number: 10/052,032

Art Unit: 1733

guidelines is not mandatory. Furthermore, 37 CFR 1.97 and 1.98 do not require that the information be material, rather they allow for submission of information regardless of its pertinence to the claimed invention. Also, there is no requirement to explain the materiality of submitted references, however, the cloaking of a clearly relevant reference by inclusion in a long list of citations may not comply with Applicant's duty of disclosure, see Penn Yan Boats, Inc. v. Sea Lark Boats Inc., 359 F. Supp. 948, aff'd 479 F. 2d. 1338.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sam Chuan C. Yao whose telephone number is (571) 272-1224. The examiner can normally be reached on Monday-Friday with second Friday off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Crispino can be reached on (571) 272-1226. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
